SUPPLEMENTARY INFORMATION

I. Abstract

The Advance Monthly Retail Trade Survey (MARTS) provides an early indication of monthly sales for firms located in the United States and classified in the Retail Trade or Food Services sectors as defined by the North American Industry Classification System (NAICS).

The MARTS sample is comprised of approximately 4,900 firms selected from the larger Monthly Retail Trade Survey (MRTS) sample of about 12,000 firms (OMB Control Number: 0607-0717). Firms are selected into the MARTS sample using a stratified design where the strata are defined by industry and size. The MARTS sample is re-selected, generally at 2 ½ to 3 year intervals, to ensure it is representative of the target population.

The survey requests sales and e-commerce sales for the month just ending. If reporting data for a period other than the calendar month, the survey asks for the period's length (4 or 5 weeks) and the date on which the period ended. The survey also asks for the number of establishments covered by the data provided and whether or not the sales data provided are estimates or more accurate “book” figures.

Survey results are published approximately 9 working days after the end of the reference month. There would be a delay in the availability of these results if the survey were not conducted, as results from the MRTS are not published until approximately 6 weeks after the end

of the reference month. The Bureau of Economic Analysis (BEA) uses the survey results as critical inputs to the calculation of the Gross Domestic Product (GDP). Policymakers such as the Federal Reserve Board (FRB) need to have the timeliest estimates in order to anticipate economic trends and act accordingly. The Council of Economic Advisors (CEA) and other government agencies and businesses use the survey results to formulate and make decisions about economic policy.
